

How do different AI models frame the same news story?

 Llama

AI is great for summarization. The problem?

Summarization is selection, which is inherently unneutral.

65%

Americans use AI weekly (Edison Research). Even more interact with AI-generated text weekly — increasingly through **news summaries**.

4

choices in every summary: **who** to name, **how** to characterize them, **what context** to include, **how certain** to sound.

How

do these choices **differ systematically by model** or correlate with the company that built it?

THE QUESTION

How do models from different companies frame the same event differently?

APPROACH

Feed a news article to 5 models, asking each to **summarize** it. **Score** each summary on 4 framing dimensions. **Show** exactly where and how each model diverges.

HYPOTHESIS

Covering **news about AI** will cause the models to display the **most divergence** because they're describing themselves in their own industry and may be trained with biases toward themselves.

Llama 4 Scout Meta ACCOUNTABILITY2.3s President Donald Trump is threatening to hold federal judge Richard Leon accountable for 'Death and Destruction' if his proposed \$400 million ballroom project in Washington, D.C. is stalled. Trump claims the ballroom, which he says will serve as a 'droneport,' is critical to the nation's security. Judge Leon had ruled in April that Trump lacked legal authority to proceed with the project, and an injunction was put in place to halt above-ground construction. The Justice Department has joined Trump's side, arguing that the ballroom is necessary for the president's safety, while the National Trust for Historic Preservation is continuing to challenge the project in court.	GPT-5.4 Nano OpenAI ACCOUNTABILITY1.8s President Donald Trump claimed that Washington, D.C. would face "Death and Destruction" if a federal judge did not allow his White House ballroom project to proceed. In a Sunday Truth Social post, Trump accused Judge Richard Leon of "playing games" after Leon's April ruling found Trump lacked legal authority to continue the above-ground construction, and warned Leon would be held responsible for any harm. Trump argued the roughly \$400 million ballroom would enhance national security by functioning as a "droneport," and he shared AI-generated images supporting that claim. The Justice Department has also pressed for the injunction to be lifted, citing recent attacks on Trump, while the National Trust for Historic Preservation said it will continue its lawsuit. The dispute centers on whether the project's halted construction should remain blocked during ongoing legal proceedings.	Grok 4.20 xAI SECURITY1.9s President Trump lashed out at federal Judge Richard Leon on Truth Social, warning that if the judge's April injunction halting construction of a \$400 million ballroom at the White House is not immediately dismissed, the judge will be held responsible for any "Death and Destruction" that befalls the nation's capital. Trump argued the ballroom is essential to national security because it would function as a state-of-the-art "DronePort" capable of defending Washington against modern threats that rifles and pistols cannot counter. The post included AI-generated images of the proposed drone facility. The Justice Department has joined Trump in pressing to vacate the injunction, citing recent assassination attempts against the president and dismissing the National Trust for Historic Preservation's lawsuit as lacking standing. The historic-preservation group has said it will continue its legal challenge.	Gemini 3.1 Flash Lite Google COMPARINGSECURITY1.4s Former President Donald Trump has publicly attacked Judge Richard Leon for issuing an injunction that halted construction on a proposed \$400 million ballroom at the White House. Trump claims the structure is essential for national security, asserting that it will serve as a sophisticated 'droneport' capable of defending Washington, D.C. from modern weaponry. The judge's ruling, which stemmed from a lawsuit filed by the National Trust for Historic Preservation, remains a point of contention as the Justice Department also pushes for the injunction to be vacated. Trump has warned of 'death and destruction' should the project remain stalled, holding the judge personally responsible for potential security failures. Despite these pressures, the National Trust for Historic Preservation maintains that it will continue its legal challenge against the project.	Claude Haiku 4.5 Anthropic COMPARINGCONFLICT5.6s President Trump has threatened federal Judge Richard Leon with accountability for "Death and Destruction" if his proposed \$400 million White House ballroom project is not completed on time, claiming the facility is essential to national security as a "droneport." Judge Leon previously ruled in April that Trump lacked legal authority to proceed with the ballroom, issuing an injunction that halted above-ground construction, though an appeal temporarily blocked the injunction until June. Trump and the Justice Department argue the ballroom is critical for the president's safety, particularly following recent assassination attempts, while the National Trust for Historic Preservation—whose complaint led to the injunction—maintains its lawsuit. The president's claims about the ballroom's security necessity have been questioned, as Washington, D.C. already has sophisticated air defense systems managed by the Joint Air Defense Operations Center.

COMPARING

POLITICAL1.4s

In an exclusive interview with Meet the Press, Kentucky Governor Andy Beshear (D) voiced strong support for Texas State Sen. James Talarico's Democratic bid to unseat Republican Attorney General Ken Paxton in the 2026 U.S. Senate race. Beshear argued that Texas is now competitive for Democrats, citing shifting demographics and political dynamics that could make the state "in play." He framed the contest as a high-stakes matchup between Talarico's progressive record and Paxton's controversial tenure, which has included legal battles and impeachment proceedings.

PROGRESS

4.0s

A new report from Edison Research at SSRS shows that 65% of American adults now use AI chatbots weekly, up from 52% in February 2026, representing an addition of

approximately 35.6 million users in just three months—a growth rate comparable to the fastest-adopting consumer technologies in history.

ChatGPT remains the most widely used platform at 43% weekly usage, while Google Gemini experienced the sharpest growth, jumping from 25% to 38% usage. The data reveals that AI adoption is heavily skewed toward personal use (63% of adults) rather than professional contexts (33%), with younger adults aged 18-34 leading adoption at 78% weekly usage.

Awareness of AI platforms has also increased substantially, with 97% of Americans now aware of at least one AI platform, and Claude AI from Anthropic doubling its awareness from 21% to 42% following Super Bowl advertising and media attention.

SO WHAT?

Why does divergence in AI news summary framing matter?

Scale changes everything.

Systematic framing differences compound across hundreds of millions of people using AI daily to summarize information like the news.

Users never see the alternative.

Someone reading Claude's summary of a breaking news story has no idea how GPT or Gemini would frame the same event.

This is a measurement tool, not a verdict.

The goal is empirical: make framing differences **visible, quantifiable, and comparable for any article.**
